UX/UI & Visual Design

Giuliana Altieri/

UX/UI Designer with a graphic designer's eye

giulianaaltieri.github.io giulianaltieri99@gmail.com linkedin.com/in/giuliana-altieri • Turin, Italy

Hello!
I'm Giuliana.

A hybrid designer: product thinking on one side, visual craft on the other.

As a consultant at Italdesign Giugiaro, I maintain the design system for a major international automotive OEM, design in-vehicle interfaces and work with developers and global teams every day.

Before moving into product design, I was a graphic designer at Havas PR in Milan, creating campaigns for international brands. That background is my edge: interfaces that work — and look right.

01 UX/UI

01 Companion App — Automotive

02 In-vehicle Infotainment — Automotive

03 Humanoid Robot Faces — Robotics

02 Visual

01 UN Women Italy — Campaign identity

02 Tuborg Italia — Key visual

03 Terna Driving Energy — Internal communication

04 Lily’s Kitchen — Packaging

05 Radicando — Branding

01

UX/UI Design

Real projects for international clients in automotive, robotics and mobile — from UX logic to production-ready UI. Client work shown anonymised; all three projects are in development.

Companion App

Putting the vehicle back at the heart of a car-management app.

Role	UX logic & full UI
Sector	Automotive · Mobile
Client	International automotive client
Status	In development

Problem

Vehicle data — the core of the app — was hidden in a small, vaguely named widget.

Solution

Rename it "Vehicle", make it a main section and rebuild the home around the car.

Result

A clearer structure that moved into development.

01 Context

A mobile companion app for an international automotive client. One account can be linked to one or more vehicles, and the app brings together vehicle status, navigation and everyday information.

I joined to design the UI — and soon realised the structure underneath needed to change first.

02 The problem

The app is built around the vehicle, yet the most important vehicle information was the hardest thing to find. The home mixed purely informative data with a grid of small widgets, all with the same visual weight even though they mattered very differently: *Weather* sat right next to *Health*.

Health was in fact the core of the app: tire pressure and monitoring, engine status and every other diagnostic category. But it was hidden in a small widget, and its name did not tell users what was inside.

03 What I did

01 **A name that says what it is**
I renamed "Health" to "Vehicle", so users know immediately where to find their car's status.

02 **From hidden widget to main destination**
I moved Vehicle into the bottom navigation bar, next to Home and Navigation: the car's status is now one tap away from any screen.

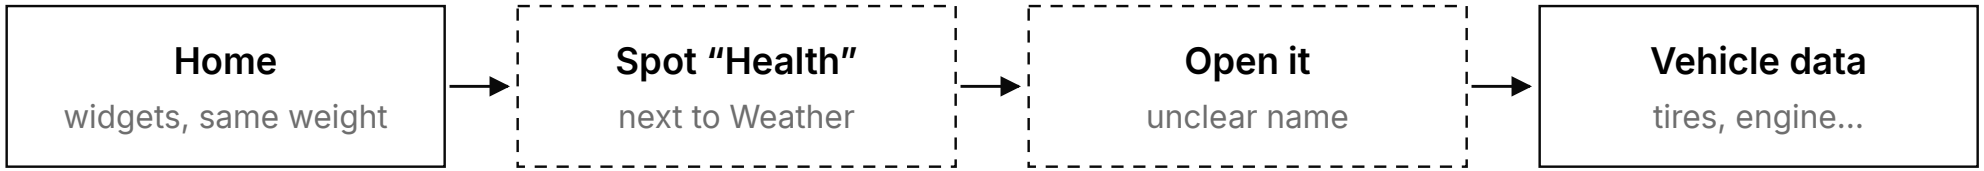

03 **A home built around the car**
I redesigned the home with a render of the vehicle as its visual anchor and a clearer hierarchy of information.

04 **Multi-vehicle, made visible**
Because an account can hold more than one vehicle, I added a page indicator under the car: users understand at a glance that they can swipe between vehicles.

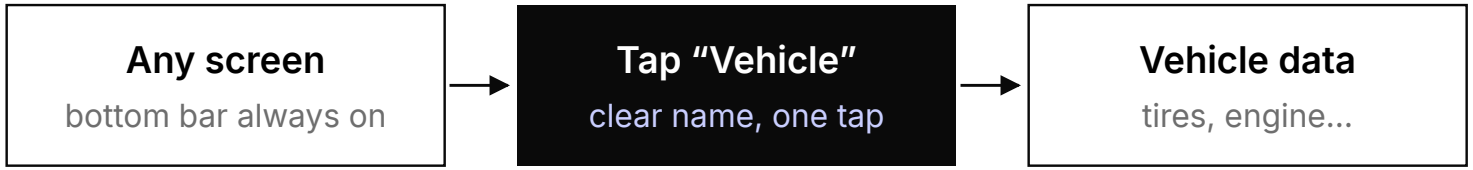

04 Outcome

The new information architecture and UI moved into development, where the app is today.

Before

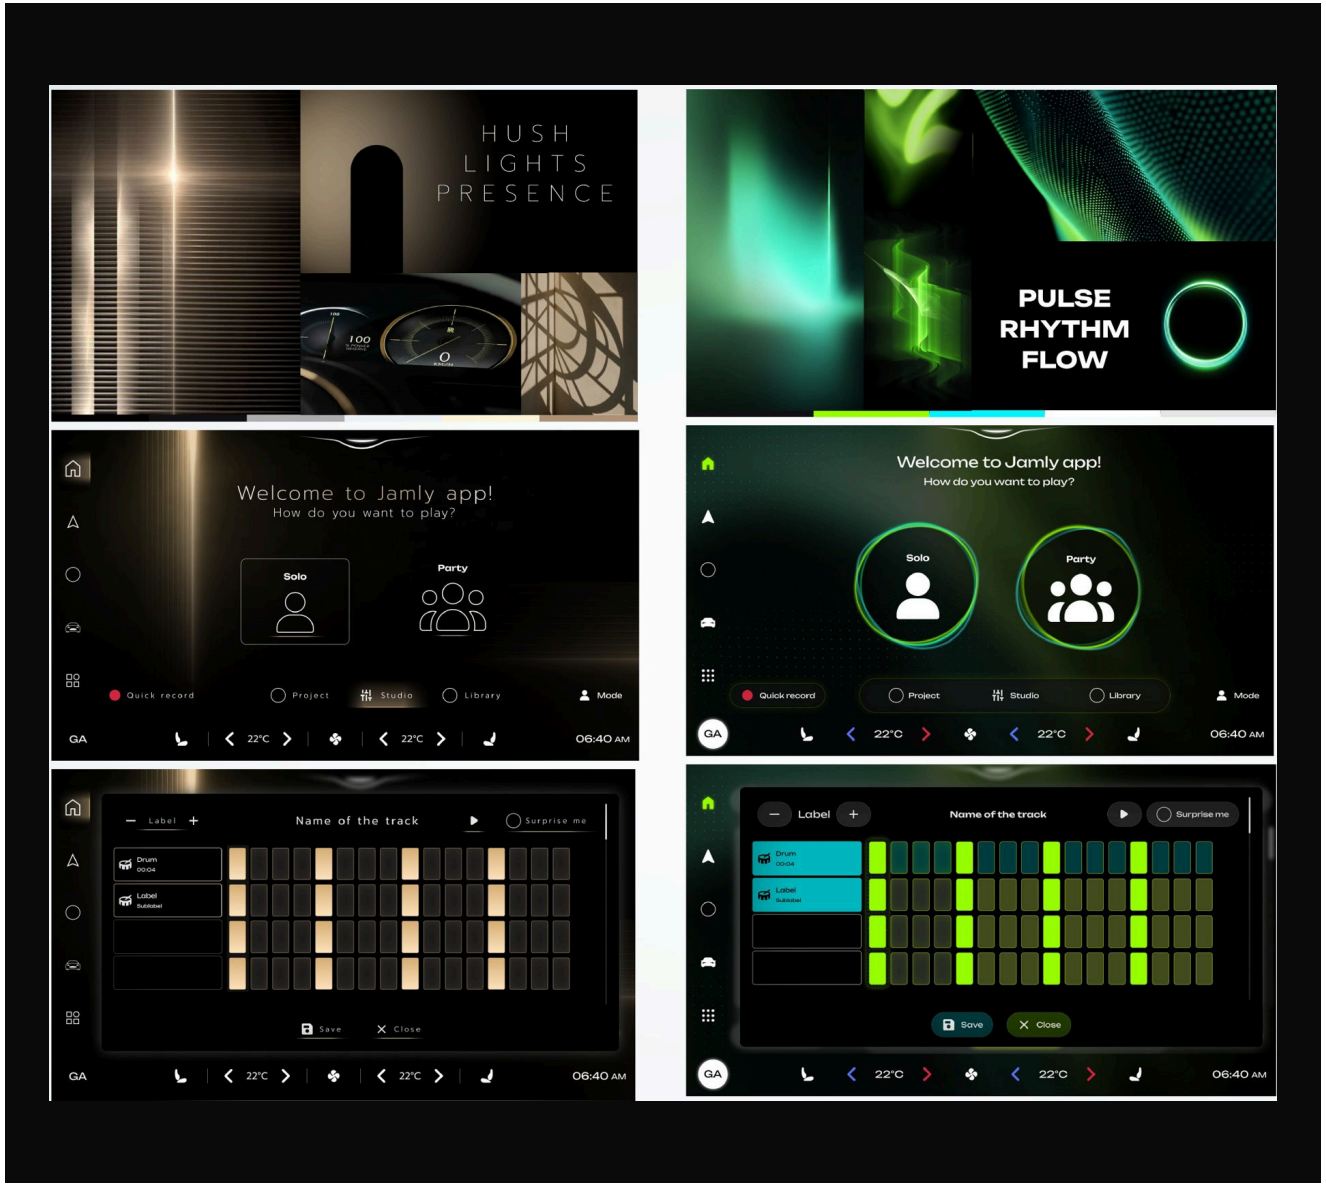

After

In-vehicle Infotainment

From mood-driven visual directions to a scalable infotainment UI.

Role	UI development lead
Sector	Automotive · HMI
Client	International automotive client
Status	In development

Challenge

Give an in-vehicle interface a distinct character without losing consistency.

Approach

Keyword-driven visual directions, translated into components and layouts.

Result

A UI system for the infotainment, now in development.

01 Context

An in-vehicle infotainment system for an international automotive client. Before scaling the interface, the team needed to explore different personalities for it — and then turn the chosen one into a coherent set of screens.

02 The challenge

Give the infotainment interface a distinctive character, while turning UX requirements into UI components that stay coherent across screens, scale, and match the brand’s visual language.

03 What I did

01 **Visual directions with a personality**
I developed alternative visual directions, each defined by three keywords that set its mood and guided every design choice.

02 **From mood to components**
I translated the directions into UI components and screen layouts for the infotainment system, working closely with the design team.

03 **Consistency at scale**
The same components and layouts carry each direction, so the system can change its character without losing coherence.

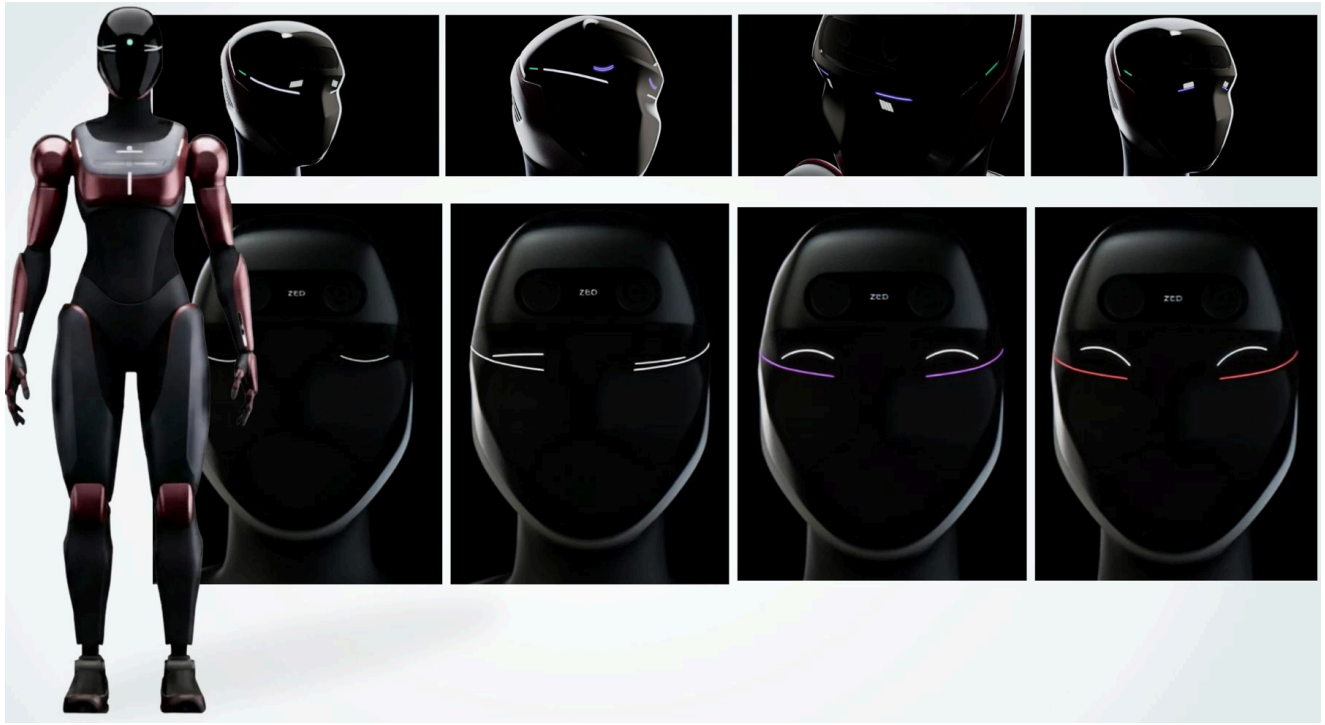

04 Outcome

The UI is currently in development.

Humanoid Robot Faces

Designing the face — and the feelings — of a humanoid robot.

Role	UX requirements & UI
Sector	Robotics · HRI
Client	International robotics client
Status	In development

Challenge

Make a robot's state and intentions readable at a glance.

Approach

50+ explorations, one visual language, a system of 12 expressions.

Result

An expression system now in development.

01 Context

An intelligent humanoid robot whose digital face is its main way of communicating with people. I worked on it in close collaboration with the design team.

02 The challenge

People read a robot's state and intentions from its face before anything else. The expressions had to be immediately understandable, consistent with each other and aligned with what the robot actually does.

03 What I did

01 **UX requirements first**
I defined what the face needed to communicate, aligning user needs, the robot's functions and visual interaction.

02 **Wide exploration**
I designed 50+ graphic proposals to explore different visual languages for the face.

03 **One language, twelve expressions**
Once a direction was chosen, I developed a system of 12 facial expressions built on it, consistent in shapes, proportions and style.

04 Outcome

The expression system is currently in development.

02

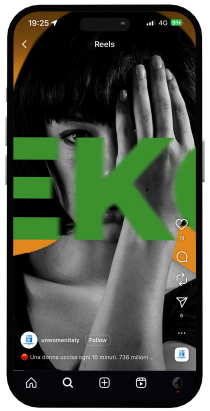

Visual & Brand

Campaigns, identities and packaging for international brands, created at Havas PR in Milan — plus Radicando, my thesis at Politecnico di Torino.

UN Women Italy

Essential, symbolic, powerful: an identity that stays with you — and takes action.

Type	Campaign identity · Social
Context	Havas PR · Milan
Role	Visual identity & launch video storyboard
Year	2025 — 26

Launch reel

Instagram posts

Goal

Make a campaign against violence on women impossible to scroll past.

Idea

An essential, symbolic visual language built on one word: stop.

Delivered

Campaign identity, launch-video storyboard and Instagram content.

01 The goal

UN Women Italy needed a campaign that would raise awareness about violence against women and push people to act — starting from social media, where attention lasts a second.

02 The idea

An essential, symbolic visual approach: few elements, strong contrasts and a message that repeats like a chant. The identity had to work as a single, recognisable voice across video and static posts.

03 What I did

01 **Campaign identity**
Defined the graphic language of the campaign: type, colour and image treatment.

02 **Launch video storyboard**
Created the storyboard for the launch video.

03 **Instagram content**
Designed static posts that keep every piece coherent and impactful.

04 The result

A coherent campaign system: one graphic language carried from the launch video to every post, so each piece reinforces the same message.

Tuborg Italia

Form, rhythm, and a presence in constant motion.

Type	Key visual · Event
Context	Havas PR · Milan
Role	Key visual & touchpoints
Year	2025 — 26

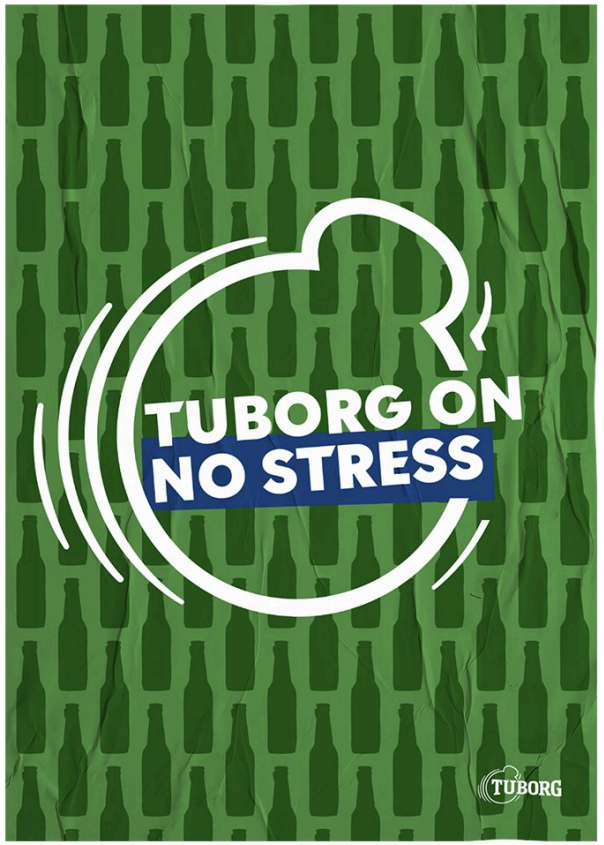

Roll-up

360° video platform

Poster — #suonafresco

Poster — Tuborg on, no stress

Goal

Bring the brand to life at a music festival.

Idea

A key visual and a call to action — #suonafresco — that move like music.

Delivered

One concept applied across physical and digital touchpoints.

01 The goal

Create Tuborg’s presence at a music festival, in line with the brand’s identity, and turn it into something people want to interact with and share.

02 The idea

A key visual built on form and rhythm, with the call to action *#suonafresco*: a presence in constant motion, like the music around it.

03 What I did

01 **Key visual & call to action**
Concept and development of the festival key visual and of #suonafresco.

02 **Physical touchpoints**
Roll-ups, a mirror installation, a tattoo vending machine and a 360° platform.

03 **Digital formats**
Video formats for Instagram stories.

04 The result

A single concept that holds together across very different formats, from a roll-up to a 360° platform, creating an immersive experience aligned with the spirit of the festival.

Terna Driving Energy

Beyond what you see, beyond what you know.

Type	Internal communication · Identity
Context	Havas PR · Milan
Role	Communication concept & identity
Year	2025 — 26

Poster — storytelling

Poster — road trip

Social posts

Landing page — competition

Goal

Strengthen the relationship between the company and its employees.

Idea

Three formats, three identities, one shared visual system.

Delivered

Logos and materials for posters, social posts and quizzes.

01 The goal

An internal communication proposal for Terna, designed to strengthen the bond with employees and build a sense of belonging.

02 The idea

The proposal is built on three formats — company storytelling, a multi-stop journey across locations and an internal competition — each with its own identity, connected by shared visual elements.

03 What I did

01 **Three connected logos**
A dedicated logo for each format, linked by shared visual elements.

02 **Applications**
Posters, social posts and quizzes built on the system.

04 The result

A flexible identity system: three distinct formats that are immediately recognisable as part of the same family.

Lily's Kitchen

Play, share, enjoy.

Type	Packaging · Illustration
Context	Havas PR · Milan
Role	Packaging & illustrated content
Year	2025 — 26

Cat-play box

Assembly instructions

Recipe book for humans

Goal

Make every monthly unboxing feel special.

Idea

Content to play with, share and enjoy — for pets and their humans.

Delivered

Illustrated cards, a cat-play box and a recipe book.

01 The goal

Monthly content for Lily’s Kitchen unboxing moments, designed to surprise customers every time they open a box.

02 The idea

Play, share, enjoy: materials that turn the box itself into part of the experience, for pets and for the people who love them.

03 What I did

01 **Illustrated cards**
Monthly cards and special materials for the unboxing.

02 **Cat-play box**
A play box conceived from the die-cut, with fully customised graphics.

03 **Recipe book for humans**
Dishes to cook and share with their pets.

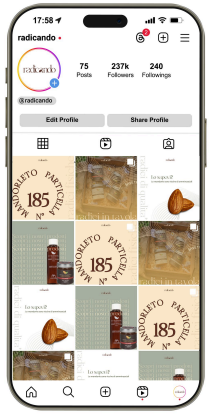

04 The result

A family of materials that extends the brand beyond the product, from play to the kitchen.

Radicando

Rooted in tradition, crafted for today.

Type	Branding · Packaging · Thesis
Context	Thesis · Politecnico di Torino
Role	Research, branding & packaging
Year	2024

Instagram profile

Instagram post

Thesis book

Goal

Bring the Toritto almond — and its land — back into the spotlight.

Idea

A brand rooted in tradition, with every pack traceable to its grove.

Delivered

Identity, packaging system and social formats.

01 The goal

My thesis at Politecnico di Torino: rediscover the Toritto almond, an excellence of Southern Italy deeply connected to the Murgia territory, and give it a contemporary brand.

02 The idea

Rooted in tradition, crafted for today: an identity inspired by fields and agricultural landscapes, and packaging that tells where each almond comes from.

03 What I did

01 **Visual identity**
Inspired by fields and agricultural landscapes.

02 **Traceable packaging**
A packaging system with a unique code linking each product to its exact almond grove.

03 **Social formats**
Content formats to build a community around the brand’s values.

04 The result

A complete brand system — from the pack on the shelf to the community online — built around the value of origin.
